

PRESS RELEASE

Date: November 17, 2008. For Immediate Release

Three Great New Products from Fischer Panda at METS 2008 and London Excel 2009

Following the huge success of the 4kW Panda 4000i fixed-speed inverter based generator since its launch at METS in 2007, a variable speed version will be launched at METS 2008 and for the UK market at London Excel in January 2009.

Using the same environmentally-conscious technology, the 6kW Panda 6000i will also be launched at METS with a prestigious DAME award nomination.

Fischer Panda variable-speed inverter generators closely match their output with the electrical load by varying the generator engine speed. This means that for the majority of end-user load profiles, exhaust emissions and fuel

consumption are considerably lower than an equivalent traditional fixed speed generator. Additional benefits include a pure sine wave output with exceptional voltage and frequency stability, lower average sound output and best in class dimensions and weight – the Panda 6000i is 550mm L x 440mm W x 530mm H and weighs only 116kg.

Another new product at METS 2008 will be the re-launched Panda 4 Farymann engine based 4kW genset. This has several new design enhancements including super powerful motor-starting capability, clean sine wave output, simpler installation and reduced maintenance. The sets will be available with direct sea water and indirect (heat exchanger) cooling.

Fischer Panda UK Ltd are distributors of Fischer Panda diesel generators for marine and specialist vehicles. They also distribute HRO/Sea Recovery desalinators, Dometic (Cruisair and Marine Air Systems) marine air-conditioning equipment and Victron power products.

FP UK Ltd PR Contact: Lindsay Ross – Sales Manager Marine Division.
